

Coast Products FLOOR CARE SYSTEM

Product Application

“Keep a Clean Shine on Your Floors Longer with Less Maintenance”

The new COAST PRODUCTS FLOOR CARE SYSTEM offers a solution to cleaner, brighter looking floors with less maintenance. Four products provide an integrated program for your ship, barracks or administrative offices. We take the guess work out of floor maintenance! Here are some easy steps to using this system:

- 1** Depending on your current floor maintenance program, select either the **SAFETY FINISH NON BUFF** (for a limited maintenance program) or **SAFETY FINISH WAX** (for a regular buffing schedule).
- 2** Follow the label instructions for using **POWER STRIPPER** to remove all old floor finish buildup. After stripping, use a clean mop to apply a clear water rinse to the floor and remove any remaining stripper residue from the floor surface.
- 3** Once the floor is clean and dry, use a finish mop, microfiber mop or wax applicator to apply the floor finish of your choice. For the **SAFETY FINISH NON BUFF**, apply 5 coats allowing a 30 minute drying time between each coat. For the **SAFETY FINISH WAX**, apply 3 coats allowing a 30 minute drying time between each coat. Allow 24 hours after application before using a buffing machine on the **SAFETY FINISH WAX**.
- 4** The **HIGH SPEED NEUTRAL CLEANER** can be used at 2 oz. per gallon with a clean mop for the daily cleaning of waxed floors. This product is excellent at removing scuff and black heel marks and will not haze the floor finish with regular use. **HIGH SPEED NEUTRAL CLEANER** is also very effective on PRC decks and all types of flooring surfaces.
- 5** Use **SAFETY SPRAY BUFF** periodically along with a floor buffing machine to remove black heel marks, clean and shine the floor surface.
